

Accessories

For Hydraulic Power Units

► DESCRIPTION:

Continental Hydraulics offers a wide range of accessories that can be either mounted on the power unit, or purchased separately. Everything from filters and gauges to gear pumps and electric motors can be found in the Accessories Catalog.

A wide selection of heat exchangers and temperature monitoring devices can be selected to remove excess heat from power units and extend the life of most hydraulic components.

Filters, strainers and magnets help reduce the amount of contamination in the system reducing the wear and tear on pumps and valves.

In-line accessories such as relief valves, ball valves and check valves help finish any plumbing needs required for your system.

A full description and dimensional information can be found for each component as well as flow curves, technical data and part numbers on its given page. If additional information is needed, please call Continental Hydraulics.

► TABLE OF CONTENTS:

Accessory Locations for NFPA/JIC Power Units . . .	2-3
Drip Pans	4
Filler Breather / T.R.A.P.™ Breathers	5-7
Return Filters	8-13
In-Tank Filters	14-17
Pressure Filters	18-25
Inlet Strainers	26-27
Heat Exchange Air-to-Oil	28-31
Heat Exchange Water-to-Oil	32-34
Water Modulating Valves	35
“Y” Type Water Strainers	36
Tank Heaters	37
Pressure: Switch/Sensor	38-39
Temperature: Switch/Sensor	40-41
Level/Temperature: Switch/Sensor	42-43
Pressure Gauges	44
Needle Valve	45

Gauge Isolator	46
Rapid Response Relief Valve	47
Check Valves	48
Ball Valves - High and Low Pressure	49-50
Casters - Corrosion-Resistant 4.00” & 6.00” . . .	51-54
Flow Meters	55
Sight Gauges	56-57
Reservoir Drain Valve	58
Magnets	59
Accumulator (Bladder)	60
Accumulator Dump Valve	61
Gear Pumps/Fixed Vane Pumps SAE-AA	62
Gear Pumps/Fixed Vane Pumps SAE-A	63-65
Pump Motor Adaptors and Couplings	66-67
Electric Motors	68-69
Motor Starters	70-71

R210	210 Gallons (794.8 liters)

► FILLER BREATHER:

DESCRIPTION

Filler Breathers are designed to be used as a filler port for hydraulic power units. This unit also lets the tank breathe while keeping out airborne particles.

- 10 Micron Foam Media
- 10CFM Air Flow Capacity
- 115 GPM Oil Transfer Rate.

Dimensions:
inches (± .125")
millimeters (± 1 mm)

**MODEL
CODE: FB**
Filler Breather
Part # 136647

► **T.R.A.P.™ FILLER BREATHER**

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Keep moisture and dirt OUT of your hydraulic reservoir with Donaldson's innovative technology, the Thermally Reactive Advanced Protection (T.R.A.P.™) breather! It senses moisture and begins working faster and lasts longer than desiccant breathers. This is an entirely new technology that provides better protection for your oil or hydraulic fluid.

**MODEL
CODE: BN**

Breather NPT
Part # 1001906

Electronic Indicator Actuated by
Pressure Differential, Flashes Red
to Indicate Change Out is Needed.
Indicator Setting, 1PSID.

► **T.R.A.P.™ FILLER BREATHER**

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Keep moisture and dirt OUT of your hydraulic reservoir with Donaldson's innovative technology, the Thermally Reactive Advanced Protection (T.R.A.P.™) breather! It senses moisture and begins working faster and lasts longer than desiccant breathers. This is an entirely new technology that provides better protection for your oil or hydraulic fluid.

Breather Bayonet
Breather Part # 1001489
Basket Part # 1003956

Electronic Indicator Actuated
by Pressure Differential,
Flashes Red to Indicate
Change Out is Needed.
Indicator Setting, 1PSID.

*Breather 1001489 will not
fit on the same basket that
comes with the standard Filler
Breather 136647.

► **RETURN FILTER - 10 GPM (37.8 LPM)**

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Return filters can greatly increase the life of your hydraulic fluid and components. Filters should be sized to handle the maximum return flow of the system.

- 10 gpm (37.8 lpm)
- Maximum Pressure: 150 psi (11 bar)
- By-Pass Cracking Pressure: 25 psi (2 Bar)
- Visual Indicator Standard
- Electrical Indicator Optional

Wiring Code

Common = #1

N.O. = #3

N.C. = #2

► AIR-TO-OIL HEAT EXCHANGER - RETURN FLOW

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

These Heat Exchangers are designed to be used primarily as a cooling device for return flow.

- Heat Removal Up to 80 HP (59.7 kW)
- Oil Flows to 150 gpm (567.7 lpm)
- Mounting Brackets Included
- SAE Connections
- Three Phase Motors
- Built-In 30 psi (2 bar) By-Pass Valve

► AIR-TO-OIL HEAT EXCHANGER - RETURN FLOW

Heat Exchanger Selection Procedure:

Performance curves are based on 100 SUS (20.6 Cs) oil leaving the cooler 40° F. (5° C.) higher than the incoming water temperature used for cooling. This is also referred to as a 40° F. approach temperature. Horsepower removed needs to be modified if the above is not met.

STEP 1: Determine the Heat Load. This will vary with different systems, but typically, coolers are sized to remove 25 to 50% of the input horsepower of the power unit.
(Example: 100 HP power unit x .33 = 33 HP heat load. If BTU/hr. is known: $HP = \frac{BTU/hr.}{2545}$)

STEP 2: Determine Approach Temperature.
Desired oil leaving cooler °F - Ambient Air Temperature °F = Actual Approach (maximum reservoir temperature).

STEP 3: Determine Curve Horsepower Heat Load.
Enter the information from above:

$$\text{Horsepower Heat Load} \times \frac{40}{\text{Actual Approach}}$$

Viscosity Correction = Curve Horsepower

Correction: 50 SUS = .90
100 SUS = 1.00
150 SUS = 1.14
200 SUS = 1.20

STEP 4: Enter curves at oil flow through cooler and curve horsepower. Any curve above the intersecting point will work.

STEP 5: Determine the Oil Pressure Drop.

● = 5 psi (.3 bar) ■ = 10 psi (.7 bar).

▲ = 20 psi (1.4 bar) x = 40 psi (2.8 bar)

Multiply pressure drop from curve by correction factor:

50 SUS = .90
100 SUS = 1.00
150 SUS = 1.14
200 SUS = 1.20

► AIR-TO-OIL HEAT EXCHANGE - CASE DRAIN

DESCRIPTION

The HEA4 Heat Exchanger is designed to be used primarily as a cooling device for the case drain lines on pressure compensated vane pumps. The cooler must be mounted behind a T.E.F.C. motor to provide the required air movement.

- Utilizes Existing Motor Air Stream
- Protective Steel Case
- 150 psi (10 bar) Pressure Rating
- Gasketed Between Motor and Shell

► WATER-TO-OIL HEAT EXCHANGER

DESCRIPTION

These shell and tube Heat Exchangers are highly efficient and can extend the life of hydraulic components and fluid. The heat exchanger must be placed in the return or low pressure portion of the circuit. Models HEW21, HEW31 and HEW33 have built-in surge cushion.

- Steel Shell
- Copper Tubes
- Aluminum Fins
- HEW11 Has Cast Iron End Bonnets
- HEW21 - HEW33 Have Grey Iron End Bonnets

STEP 4: Enter curves at oil flow through cooler and curve horsepower. Any curve above the intersecting point will work.

STEP 5: Determine the Oil Pressure Drop.
● = 5 psi (.3 bar) ■ = 10 psi (.7 bar).
Multiply pressure drop from curve by correction factor:

50 SUS =	.5
100 SUS =	1.00
150 SUS =	1.50
200 SUS =	2.00

► WATER MODULATING VALVES

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

A Water Modulating Valve should be placed in the water inlet to the heat exchangers to provide maximum operating efficiency, conserve water usage and eliminate over-cooling the hydraulic oil. The temperature sensor should be located as close as possible to the pump inlet. The sensor may be installed directly into the oil, or into a bulb well.

► PRESSURE SWITCH

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Pressure Switches are used to sense the pressure in a fluid line and control other devices such as electrical components, i.e. valves, motor start/stop switches, alarms, warning lights and programmable logic circuits.

- UL Listed, CSA Certified
- 303 Stainless Steel Piston
- 125 to 3000 psi (9 to 207 bar) Adjustable
- 40 to 180 psi (3 to 12 bar) Deadband
- 10,000 psi (690 bar) Proof Pressure
- SPDT N.O. or N.C. Switch
- 15 Amp, 125/250/480 VAC Resistive
- 1.5% Set Point Repeatability

► PRESSURE GAUGE

DESCRIPTION

Pressure Gauges are used to indicate hydraulic pressure at a given point in the system.

- 2-1/2 " (63.5 mm) Diameter Face
- Spiral Bourden Tube
- Infrangible Polycarbonate Lens
- Stainless Steel Case and Bezel
- Built-In Snubber
- Dual Readout PSI/Bar
- $\pm 1.6\%$ FSD Accuracy
- Temperature Range =
40°F. to 180°F. (4°C. to 80°C.)

Liquid Filled Gauges

- Reduces Pulsation and Vibration Wear
- Weather Tight - No Condensation
- Lengthened Gauge Life
- Continuously Lubricated Internal Parts

G5	964176	0 - 5000 psi (0 - 345 bar)

*NOTE: Select a gauge which does not allow the operating pressure to exceed 75% of the scale range

► NEEDLE VALVE

DESCRIPTION

Ideal for pressure gauge shutoff. It can also be used as a safety bleed down for an accumulator.

- Compact Design
- 5000 psi (345 bar) Working Pressure
- SAE O-Ring Ports
- Knurled Knob
- Viton Seals Standard
- Dual Readout PSI/Bar
- -15°F. to 400°F. (-26°C. to 204°C.)
Temperature Range

Schematic Symbol

**MODEL
CODE:**

N

Needle Valve

Part No. 964086

Dimensions:
inches (± .125")
millimeters (± 1 mm)

► GAUGE ISOLATOR

DESCRIPTION

Ideal for extending gauge life. When not reading pressure, the gauge is vented to tank to protect it against pressure pulses from the system.

- Panel Mountable
- Maximum Panel Thickness 5/16" (8 mm)
- 5800 psi (400 bar) Working Pressure
- Viton Seals Standard
- 30°F. to 240°F. (-1°C. to 116°C.)
Operating Temperature

Dimensions:
inches (± .125")
millimeters (± 1 mm)

**MODEL
CODE:**

IV

Isolator Valve
Part No. 128809

To Operate:
Push and Hold For Momentary Read.
Push and Twist Clockwise for Continuous Reading.

► RELIEF VALVES

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Rapid Response Relief Valves are especially suited to limiting pressure surges caused by rapidly shifting spool valves, rapidly reversing hydrostatic drives, or the accumulator effect of long lines. They are frequently installed for over-pressure protection in circuits using pressure compensated variable displacement pumps. Systems using Continental Hydraulics vane pumps above 1500 psi (103 bar) may require a rapid response relief valve.

► CHECK VALVES

DESCRIPTION

Check Valves allow flow in only one direction.
Used for pump isolation or load holding.

- SAE O-Ring Ports
- Precision Machined and Hardened
- Ground Poppet
- Metal-to-Metal seal Design
- Viton Seals Standard

► BALL VALVES - HIGH PRESSURE

DESCRIPTION

Ball Valves are manual valves used as on-off circuit valves. They may also be used as isolating components for system maintenance.

- Full Flow Passage For Unrestricted Fluid Flow
- Direction of Flow Indicated On Control Handle
- 5000 psi (345 bar) Working Pressure
- SAE O-Ring Ported

Dimensions:
inches (± .125")
millimeters (± 1 mm)

► BALL VALVES - LOW PRESSURE

DESCRIPTION

Low Pressure Ball Valves are used for pump inlet shut-off.

- Full Ported
- NPT and SAE Ports
- Teflon Seals (Ball and Stem)
- Hot Pressed Brass Body and Ball
- Chromium Plated Ball and Body

► FLOW METERS

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Flow Meters provide up to the minute answers about pump condition and/or systems settings. General design features include rugged construction, operation in any position and accuracy within ± 2%. No special piping required. Flow Meters are relatively insensitive to shock and vibration. They are direct reading and require no electrical connections.

- 360° Rotatable Guard/Scale
- SAE O-Ring Ports
- 2024-T351 Anodized Aluminum Body, Piston and Cone
- Viton Seals Standard
- -20°F. to 400°F. (-29°C. to 204°C.) Continuous Temperature Range.

► PUMP MOTOR ADAPTERS AND COUPLINGS

Dimensions:
inches (± .125")
millimeters (± 1 mm)

DESCRIPTION

Power unit design and assembly can be greatly simplified by using pump/motor mounts. Direct mounting flange mount pumps to NEMA "C"-face motors by a pump/motor mount eliminates the need for coupling guard, foot brackets, shims risers and mounting plate. The result is the easiest installation

and most effective method of mounting a pump and motor. Couplings are enclosed in precision machined aluminum mounts to maintain critical alignment. All insert material is made of urethane. Viton and Hytrel material for phosphate ester are also available.

3 HP - 40 HP Are ABB(Baldor) Motors
50 HP - 125 HP Are WEG Motors or special request

► MOTOR STARTER

DESCRIPTION

Motor Starters are designed to meet our interpretation of the N.E.C. code. If motor or any starter components are replaced with other than original components, compliance with the N.E.C. code may be voided. Motor Starter overloads can be adjusted and reset. Standard features include:

- 1 - 50 H.P. (.75 - 37.3 kW) Full Voltage Non-Reversing
- Voltages 208, 230, 460
- Three Phase
- I.E.C. Style Components
- Side by Side Push Button (Green/Start, Red/Stop)
- NEMA 12 Enclosure
- Starters Mounted, Wired and Fully Tested

Dimensions:
inches (± .125")
millimeters (± 1 mm)
